1950 1957 1980
3. There was steam and ash coming from
Mt. St. Helens Mt. Rushmore Mt. Helena
4. It finally erupted on
June 18th May 18th March 18th
5. It could be seen in the sky as far away as
160 miles 16,000 miles 1,600 feet

There is a furry black and white animal which everyone goes out of the way to avoid. It has a large, bushy tail. It is known for its very unpleasant smell. It is the skunk.

Believe it or not, the skunk is a very friendly animal. It also makes a good pet; however, it would have to have its scent glands removed in order to become someone's pet.

The skunk's two scent glands can be found under its tail. When the animal senses danger, it will shoot its bad smelling liquid spray as far as nine feet away. The spray can be so foul smelling that it can make it very hard for a person to breathe. If one is unlucky enough to get the spray in the eyes, it can cause temporary blindness.

In spite of its unpopular reputation, the skunk has been raised on farms for its fur. The scent glands are usually removed from the young animals.

The skunk's front feet have long claws. It uses them to dig in the ground for its food. They like to eat snakes, grasshoppers, crickets, beetles, wasps and small rodents.

-
1. If you want a skunk for a pet, you must first remove its
scent glands
stripe
claws
 2. The scent glands are found
on its paw
under its tail
behind its ear
